Do you want to stop his pain...
..or heal his ulcer?

DUOGASTRONE

Why not do both at once?

Full details available on request J.3572

Calm for the stomach of the ulcer prone.

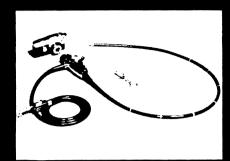

For the peptic ulcer patient
hyperacidity and hypermotility can mean pain.
Nacton forte relieves this pain by its vagal blocking action. Long-lasting pain relief is ensured, and an environment which encourages healing.

There are no side effects of the rapeutic doses. Modern of at the treatment of peptic ulceration.

Nacton forte Bengard

Full information on Nacton* forte (poldine methylsulphate B.P.) is available on request from:
Bencard - Great Frest Road - Brentford - Middlesex

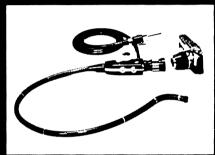

Model JF-B-Olympus duodenofiberscope, side viewing, four way tip angulation, working length 1,250 mm, automatic photography.

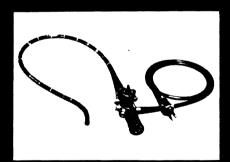

Model GF-BK-Olympus gastrofiberscope, side viewing, four way tip angulation, variable focus, automatic photography. Working length 865 mm.

the specialist service for endoscopy equipment

Now a turtner advance in colonscopy the Olympus CF-MB replacing the CF-SB. The CF-MB has facilities for biopsy, forward viewing, fingertip control of suction, insufflation and lens cleaning, four way angling tip. Working length 1,100 mm. Instrument for total colonscopy also available Model CF-LB, working length 1,865 mm.

New unique the Olympus GIF-D gastrointestinal fiberscope, forward viewing, four way angling tip, variable focus, automatic exposure photography. Working length 1,050 mm.

also available **INTRAGASTRIC CAMERAS** Full range with or without fiberoptic viewing

OLYMPUS -world leaders in fiberoptic endoscopy.

Maxolon for dyspepsia, ga peptic ulcer

fundamental treatment for gastro

flatulence, stritis, and symptoms

For the first time, treatment of gastroduodenal disorders can move beyond the simple alleviation of hyperacidity and spasm. Disturbance of gastro-duodenal motility has become increasingly established as a major factor in the aetiology of gastroduodenal symptoms. In restoring this disturbed motility to normal, Maxolon represents a unique approach to therapy. And it works - flatulence, dyspepsia, gastritis, hiatus hernia and peptic ulcer symptoms have all shown high symptomatic response to Maxolon. Even difficult post-cholecystectomy dyspepsias have responded well.

Side-effects and precautions

Although very rare at normal dosage, various extrapyramidal reactions have been reported. Maxolon's action in the gastro-duodenal tract is antagonised by anticholinergics. Maxolon should not be used during the first trimester of pregnancy.

Maxolon acts by synchronising antral and duodenal contractions, increasing the competence of the cardiac and pyloric sphincters and promoting normal peristalsis. Reflux, gastric stasis, retention and spasm are all alleviated. Normal motility is restored and gastro-duodenal symptoms resolved. The adult dosage is simple and convenient; one tablet three times a day for a month mitte 100.

Full references are included in "Maxolon in the treatment of gastro-duodenal conditions", copies of which, and further information, are available on request.

Dosage

Adults: 10 mg three times daily. Children: 2½-3 mg three times daily according to age.

-duodenal conditions Maxolon

Maxolon* (metoclopramide) is a product of

Beecham Research Laboratories Brentford, England. *regd.

ONLY COTAZYM

has accurately assayed lipase activity

Pancreatic replacement therapy can be adjusted to cover the exact amount of fat in the patient's diet

Cotazym is the only pancreatic extract with known, measurable and constant lipase activity, in addition to adequate measured amounts of trypsin and amylase. It allows simple but accurate estimation of dosage ensuring greater control over dietary intake.

Each capsule contains:

lipase sufficient to digest 17g dietary fat trypsin sufficient to digest 34g dietary protein amylase sufficient to digest 40g dietary starch.

Indications:

pancreatic deficiency states including post-gastrectomy malabsorption, fibrocystic disease and gastro-intestinal disorders resulting in steatorrhoea.

Dosage:

dosage is calculated on the fat digesting power of the lipase. 2 to 3 capsules taken with each main meal and one capsule with a snack is sufficient to cover normal daily fat intake. The contents of the capsule should be sprinkled over the food.

Judac in Lyer failure

Duphalac (lactulose) is now well established as a valuable agent in the treatment of portal-systemic encephalopathy. A recent review in Gut* describes its role in these terms.

"Lactulose is a useful addition to the existing treatment of cirrhotic patients with neuropsychiatric disorders. Most patients respond particularly those with mild and relatively stable symptoms; such patients may receive lactulose indefinitely, and enjoy improved tolerance of dietary protein lactulose is free from significant side effects, and therefore falls into place as a valuable alternative to antibiotics when prolonged therapy is required". *Gut,1970,11:1043-1048

The following work on Duphalac in portal systemic encephalopathy has been published:

Treatment of chronic portal-systemic encephalopathy with lactulose *Lencet*,1986,1:890-892.

Portal-systemic encephalopathy treated with lactulose (letter) Lancet, 1966, 2: 281

Treatment of hepatic system encephalopathy with lactulose *Medical Journal of Australia*, 1968, 2:160-163

The graph below compares mortality rates due to faecal peritonitis, era by era. It is not pedantically accurate because its sources differ. But the point is fairly made.

Why inaccurate? Because column 4 refers to 23 cases of faecal peritonitis which were treated successfully with Noxyflex. But the *3 deaths which occurred were due to causes other than peritonitis-as post-mortem revealed. The mortality rate due to peritonitis can therefore be regarded as zero.

* The whole graph, and the causes of the deaths referred to are the subject of the new Noxyflex folder "Why three deaths?" You will receive at least one copy!

When bacterial contamination of the peritoneum is diagnosed or suspected: Noxyflolin and 10 mgm. Amethocalne HC1

SCANDINAVIAN JOURNAL OF GASTROENTEROLOGY

Volume 6, No. 6, 1971

CONTENTS

Issued 20 October 1971

THE SCANDINAVIAN JOURNAL OF GASTROENTEROLOGY publishes original papers in gastroenterology and pertinent fields of nutrition. Each issue contains about 100 pages; eight issues form one annual volume. Supplements are supplied free of charge to subscribers. The subscription price, including postage, is N. kr. 220.-(U.S. \$36.-) payable in advance.

Editorial Correspondence

Manuscripts should be addressed to the managing editor. The Scandinavian Journal of Gastroenterology has no objection to the reproduction of short passages and illustrations from this journal without further formality than acknowledgement of the source.

Business Communications

Business communications, including subscriptions and orders for reprints or advertisements, should be sent to the publishers.
