GRACE WILLIAMS
(*Technical Editor*)

Gut publishes original papers and reviews concerned with practice and research in the field of gastroenterology. The field is that of alimentary, hepatic, or pancreatic disease, and papers may cover the medical, surgical, radiological, or historical aspects. They may also deal with the basic sciences concerned with the alimentary tract, including experimental work. The report of a single case will be accepted only if it is of sufficient interest in relation to a wider field of research.

COMMUNICATIONS Two copies of papers and figures should be addressed to the Editor, *Gut*, BMA House, Tavistock Square, London WC1H 9JR. Papers are accepted only on the understanding that they are not published elsewhere without previous sanction of the Editorial Committee. Manuscripts should follow the Vancouver conventions (see *Br Med J* 1979; 1: 532-5. *Gut* 1979; 20: 651-2). They should be in double-spaced typewriting on one side of the paper only. On the paper the name of the author should appear with initials (or distinguishing Christian name) only, and the name and address of the hospital or laboratory where the work was performed. A short summary should be provided at the beginning of the paper.

ACKNOWLEDGEMENT OF MANUSCRIPTS Manuscripts will not be acknowledged unless a stamped addressed postcard or international reply coupon is enclosed.

ILLUSTRATIONS *Photographs* Unmounted photographs on glossy paper should be provided. *Diagrams* These will usually be reduced to 2½ in wide. Lettering should be in either Letraset or stencil, and care should be taken that lettering and symbols are of comparable size. Illustrations should not be inserted in the text, they should be marked on the back with Figure numbers, title of paper, and name of author. All photographs, graphs, and diagrams should be referred to as Figures and should be numbered consecutively in the text in Arabic numerals. The legends for illustrations should be typed on a separate sheet. *Tables* Tables should be numbered consecutively in the text in Arabic numerals and each typed on a separate sheet.

ETHICS Ethical considerations will be taken into account in the assessment of papers (see the Medical Research Council's publications on the ethics of human experimentation, and the World Medical Association's code of ethics, known as the Declaration of Helsinki (see *Br Med J* 1964; 2: 177)).

SI UNITS All measurements except blood pressure are expressed in SI units. In the text they should be followed by traditional units in parentheses. In tables and illustrations values are given in SI units, but a conversion factor must be supplied. For general guidance on the International System of Units and some

useful conversion factors, see *The SI for the Health Professions* (WHO, 1977). Such conversion is the responsibility of the author.

REFERENCES These follow the Vancouver system—that is, references numbered consecutively in the text and listed numerically with titles abbreviated in the style of *Index Medicus, Standard journal article*—(list all authors when six or less; when seven or more, list first three and add *et al.*): James A, Joyce B, Harvey T. Effect of long-term cimetidine. *Gut* 1979; 20: 123-4. **NB: Accurate punctuation is essential.**

CORRECTIONS other than printer's errors may be charged to the author.

REPRINTS Twenty-five reprints will be supplied free of charge. Further reprints will be available on payment of the necessary costs; the number of reprints required should be sent to the Publishing Manager on the form provided with the proof.

NOTICE TO ADVERTISERS Application for advertisement space and for rates should be addressed to the Advertisement Manager, *Gut*, BMA House, Tavistock Square, London WC1H 9JR.

NOTICE TO SUBSCRIBERS *Gut* is published monthly. The annual subscription rate is £37.00 in the United Kingdom and the Republic of Ireland, and \$89.00 by surface mail in all countries overseas. Payment for overseas subscriptions should be made in US dollars, i.e. US\$89.00 or in your national currency based on the prevailing exchange rate to the US dollar of that currency, payable to the British Medical Association. Orders can also be placed with any leading subscription agent or bookseller. (For the convenience of readers in the USA subscription orders, with or without payment, can also be sent to: *British Medical Journal*, 1172 Commonwealth Avenue, Boston, Mass. 02134. All enquiries, however, must be addressed to the Publisher in London.) All enquiries regarding Air Mail rates and single copies already published should be addressed to the Publisher in London.

COPYRIGHT © 1981 *Gut*. This publication is copyright under the Berne Convention and the International Copyright Convention. All rights reserved. Apart from any relaxations permitted under national copyright laws, no part of the publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means without the prior permission of the copyright owners. Permission is not, however, required to copy abstracts of papers or of articles on condition that a full reference to the source is shown. Multiple copying of the contents of the publication without permission is always illegal.

Notes and activities

Controlled Therapeutic Trial of Unrefined carbohydrate, Fibre-rich Diet in Crohn's Disease

This prospective multicentric trial aims to compare the clinical course in two groups of patients with inactive or mildly active Crohn's disease. One group of patients is advised to modify their diet to avoid refined carbohydrate and to increase their intake of unrefined carbohydrate, vegetables, and fruit and the second is advised not to do so. The duration of the trial is two years. The trial has been running for a year and 160 patients from 32 centres are included at present. To keep up the momentum of the trial, the participation of more centres is sought, as it seems probable that the clinicians already involved have included most of their suitable patients. Would any clinician interested in collaborating in the trial please get in touch with the Central Coordinator, Dr Jean Ritchie, St. Mark's Hospital, City Road, London EC1V 2PS.

National Association for Colitis and Crohn's Disease (NACC)

This association, which is non-medical, came into being in November 1979, its principal aim being to provide support, advice and information to sufferers from the chronic inflammatory bowel diseases and their families. Its subsidiary aim is to raise funds for research. NACC, which is a registered charity, already has over 1000 members. All inquiries regarding membership should be directed to the Chairman, Mr Robert Annetts, 3 Thorpefield Close, Marshalswick, St. Albans, Hertfordshire.

At the request of the association's Executive Committee, a Medical Advisory Committee has recently been formed under the chairmanship of Professor J E Lennard-Jones. This committee would like to expand its existing list of gastroenterologists willing to act as local medical advisers to the association, and anyone who is interested should contact the Hon. Secretary of the NACC Medical Advisory Committee, Dr Stephen Kane, West Middlesex Hospital, Isleworth, Middlesex TW7 6AF.

Bayliss and Starling Society

The National Scientific Meeting of this Society on 'Regulatory peptides and gut

hormones' will be held on 18-19 December 1981 at the Royal Postgraduate Medical School, London. Invited address: Professor Viktor Mutt. Details from Dr S R Bloom/Dr J M Polak, Hammersmith Hospital, Du Cane Road, London W12 0HS.

First European Motility Symposium

This Symposium, organised by the European Motility Group, will be held in Bologna in September 1982. These symposia will take place every two years, alternating with the symposium of the International Motility Association. Details from Professor Dr G Vantrappen, University Hospital St. Rafaël, B-3000 Leuven, Belgium.

Books

Endoscopy and Biopsy in Gastroenterology Edited by P Fruhmorgen and M Classen. (Pp. 198; illustrated; DM 65). Springer: Berlin, Heidelberg, New York, 1980.

This book joins a number of recent new books relating to gastrointestinal endoscopy, and is the translation of a volume first published in German in 1979. Edited by two renowned leaders in the field of endoscopic innovation, the chapters are written by many well-known German specialists with one by Professor Menghini from Italy. The book is divided into two parts—a general section covering such topics as organisation, cleaning and maintenance, documentation, and complications and two very useful chapters on the acquisition and processing of both biopsy and cytology specimens.

The larger, second part of the book is curiously entitled 'Special Section' and covers the basic techniques, preparation, indications and contraindications for such procedures as OGD, including the post-operative stomach, and emergency endoscopy, ERCP, enteroscopy, colonoscopy, proctosigmoidoscopy, and proctoscopy. There are also chapters on needle liver biopsy, percutaneous transhepatic cholangiography, and a variety of laparoscopic procedures, in addition to a chapter, by the two editors, in therapeutic endoscopy. This chapter is surprisingly brief on foreign body removal considering the improvisations which have been reported; and the important

topic of oesophageal dilatation and tube insertion is regrettably omitted completely.

In general the presentations are all concise, well laid out and liberally illustrated with black-and-white photographs and many helpful line diagrams, supplemented by numerous tables.

The text is often short and very didactic and essentially presents the experience of the authors with little, or no, review of the experience of others. It seems a pity that the translation of this book into the English language was not accompanied by some re-editing to make it more of an international edition.

Nevertheless, this small and inexpensive book is quite comprehensive and covers a variety of areas not yet provided for in the gastroenterological literature. It will be most useful in those departments where there are both doctors and nurses under training in GI procedures and, unusually for this publisher, is well within their own financial capabilities.

Correction

Gut October issue, p A880, abstract F25: Cimetidine and perforated peptic ulcers, by A J McKay and C S McArdle. The second sentence in the second paragraph should read: 'Since cimetidine became available (November 1976) the mean annual number of elective operations has fallen from 91.4 to 50.4 (45% reduction). The number of perforations has fallen from 40.6 to 36.5 (10% reduction).
